

CONFERENCE ROOM IN GERONA, SPAIN

We have built a beautiful conference room at our production plant in Gerona, Spain. It's located on the top of a mountain that receives direct winds up to 200 km per hour that are considered Hurricane level winds for their great speed and strength, which demonstrates the stability of our structures at the engineering level. As a result of the technology, the conference room is in perfect condition, showing no negative impact from the velocity of the high winds of the Tramontana.

Our Show Room in Spain has successfully passed structural testing and waterproofing certifications. We are in the process of receiving new certifications for soundproofing, high wind speed, temperature and energy efficiency ratings, which will be available soon.
